Probable Causes

- Mild viral fever could be caused by influenza virus infection.
- Common cold is another potential cause of mild viral fever symptoms.
- Mononucleosis is a possible condition that might lead to mild fever.
- Mild viral fever can also be a symptom of respiratory syncytial virus.
- Gastroenteritis is a potential condition causing mild viral fever sometimes.

What To Do

- Stay hydrated by drinking plenty of fluids to help recover.
- Get plenty of rest and avoid strenuous activities for now.
- Monitor temperature regularly and record any changes carefully.
- Practice good hygiene to prevent the spread of the virus further.
- Keep warm and comfortable to alleviate any discomfort felt.

Recommended Diet

- Eat light and easy-to-digest foods like crackers and toast for energy.
- Drink electrolyte-rich beverages like coconut water or sports drinks.
- Consume warm and comforting foods like chicken soup for relief.
- Include foods high in vitamin C like oranges and lemons in your diet.
- Opt for bland foods like plain rice or bananas to settle your stomach.

Things To Avoid

- Avoid consuming heavy or greasy foods that are hard to digest.
- Do not drink caffeinated beverages that can dehydrate you further.
- Stay away from spicy or extremely hot foods for now entirely.
- Avoid close contact with others to prevent the spread of infection.
- Do not exert yourself physically to prevent worsening the condition.

Recommended OTC Medicines & First Aid

Basic non-prescription medicines for temporary relief:

📌 Acetaminophen - Relieves mild fever and reduces body aches.

📌 Ibuprofen - Helps in reducing fever and alleviating headache.

📌 Throat lozenges - Soothe a sore throat and provide temporary pain relief.
